

Crosswalk for DLM Special Circumstances Codes and Exit Codes

In the Dynamic Learning Maps (DLM) Alternate Assessment Kite portal system, schools were able to select among a number of special circumstances codes and exit codes. These codes were crosswalked to the Reasons Not Tested for DLM that are available in the Assessment Corrections Engine.

Students were able to have multiple DLM exit codes as the exit code file kept a running record of students' movement in the DLM Kite portal.

For example, anytime a student was removed from a school/teacher's roster, an exit code was logged in the Kite portal system. A file with all exit codes associated with a student was used and students' last exit code was used to crosswalk to the Assessment Corrections Engine reason not tested.

In the case where a student had both an exit code and special circumstances code and the two codes had conflicting exclusion rules, the reason not tested assigned to the student record was the reason not tested that required documentation for exclusion of the expectation to test.
